String Music

Light is silent music, it can fill the space like music, and it can make people happy. In the string series, the shape of the string and the bow becomes the most concise design language, and the collision of the lines outlines the scene where the bow and string meet. This simple design concept gives the lighting more artistic atmosphere.

Pure Geometry

Returning the design to the purest geometric charm, square and circle are the two extremes of geometric art, and the extreme rational order, the circle is the absolute sensual romance. The extremely simple and delicate geometric charm of the Fangyuan series relies on the familiarity of light effects, and this difficulty has become its highlight.

Jazz

Jazz pays attention to the expression of self-emotion and originality or improvisation, which coincides with our design philosophy. The enthusiasm of the jazz instruments gives us inspiration, using the shape of the instrument to present, the minimalist shape combined with the modern surface treatment process to reflect the texture.

Morning Glory

Inspired by morning glory
it outlines the shape of flower
with extremely simple lines. It presents romance in a rational
way. It is also a work suitable for DIY. It builds different
artistic conception to the space in a haphazard fashion
through different arrangement and combination. Simplicity
can give a person more imagination space. A flower is called
self-appreciation
while a mass of flowers is called a sea of flowers

FLOATING DAY SERIES

The sun is the absolute protagonist in the sky,
bringing the plasticity of life.

We transform this emotion into a space design
language, use light as a carrier to give the space bright colors,
and use high-quality stainless steel material combined with
excellent meticulous surface treatment to deliver a sense of high
quality , The freely combinable matching form makes the space

Small Boat

Design is an expression of art. Like painting, it conveys a concept or a charm. It is inspired by the design of the cultural image of the oriental boat. It is a more harmonious and stable design through the conceptual reorganization of the boat and paddle. The shape, taken from the curved shape of the boat shape, also provides a better representation of the lighting effect, which also brings the poetry of the East to life.

Ferry

Feather is the soul of freedom. When feathers are captured as design inspiration, the designer takes its light form as the carrier of light. The high-quality aluminum secondary surface treatment makes the light scattering more quality, soft and comfortable, and the intelligent induction interaction mode makes the interaction between light and users more free and human.

Light Tree

Thinking about expressing the natural spirituality and continuous growth vitality of trees in the form of light. The freely adjustable angle of the lamp head extends the light's viewing angle, so light can grow freely. The touch smart dimming function interprets the natural spirituality of the tree, making the interaction between use and perception more friendly and smart.

Magic Mirror

Minimalist design aesthetics and extreme light effect experience have been balanced and complemented in the magic mirror series. We explore the largest range of optical display and minimalist art expression, so that it can adapt to the optical needs of different spaces.

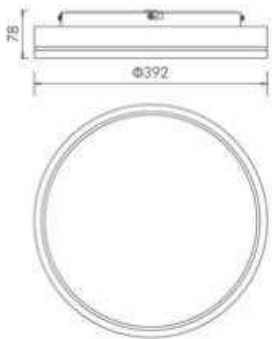

Magic mirror is a mirror to see art and optics.

Hive

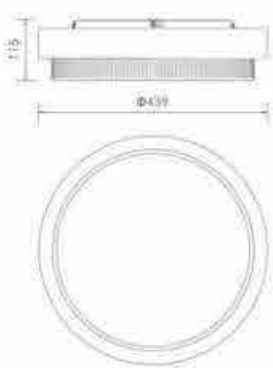

Think about the collision between light and medium
and diffuse and deduce the artistic
effect of light through different materials.

The honeycomb series is a mature
exploration of visible or
invisible light. Through the re creation of
honeycomb materials,
the penetration of light to materials takes on a different form,
bringing a refreshing effect for the expression of light.

Star Trails

The orbit of celestial bodies in the universe is the product of macro mechanics, following the most stable structure of nature and pure physical beauty.

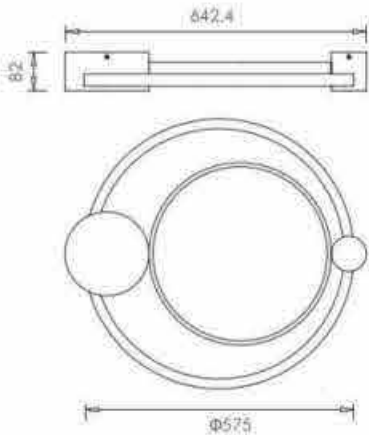

The star orbit series takes the planet orbit as the design inspiration, and the coexistence of the planet and the orbit forms a stable and full of tension art picture and carrier. The secondary light source structure which can be adjusted separately gives another more human-oriented display form to optics.
